

Greenhouse Truss Images

The images below are of the Truss we use with the high side wall house. There are really no directions but the images will help you put them together.

Just a couple notes.

Trusses can be higher or lower on the bow. If you would like it higher, cut the bottom cross member a little shorter.

All hardware should be there to put these up. Note the brackets and their position.

As always please feel free to contact us with questions.
